

TIGRAN ATOYAN

AI Operations Builder | AI Solutions & Delivery Leader | GPT Workflows, Dashboards, CRM & Business Automation

Yerevan, Armenia · +374 94 905557 · Tigran.atoyan80@gmail.com · LinkedIn: tigran-atoyan-19533a3 · <https://tigranatoyan-ai-portal.vercel.app/> · GitHub: breadcost-app / The.Director

TARGET AI ROLES

AI Operations Builder · AI Workflow Automation Consultant · AI Solutions Architect · AI-enabled Delivery/PMO Lead · Business Automation & Reporting Systems Builder

PROFESSIONAL SUMMARY

Senior delivery, product, and operations leader with 15+ years of experience turning ambiguous business problems into governed systems, dashboards, workflows, and shipping software. Combines enterprise delivery leadership with hands-on AI-assisted building: prompt-driven requirements, architecture packs, Jira-ready stories, Copilot/Claude/Cursor workflows, reporting portals, CRM automations, and full-stack prototypes. Proven operator across regulated healthcare/life sciences, gaming/media, professional services, and owner-operated bakery operations, with a record of improving on-time delivery from approx. 30% to approx. 90%, reducing lead/cycle time from months/weeks to approx. 1 week, and building transparent KPI cadences that executives and customers can actually use.

AI / AUTOMATION VALUE PROPOSITION

- Translate business chaos into AI-ready operating systems: SOPs, KPIs, data dictionaries, dashboards, workflows, governance rhythms, and implementation backlogs.
- Build practical GPT/LLM workflows for reporting, CRM hygiene, customer progress updates, sales/marketing operations, recruitment tracking, and executive weekly business reviews.
- Use AI-assisted development to move from idea to working prototype: requirements -> architecture -> domain model -> Jira stories -> GitHub/Copilot execution -> QA checklist.
- Bridge non-technical stakeholders and engineering teams: explain tradeoffs, define acceptance criteria, shape delivery plans, and convert progress into customer-readable narratives.
- Comfortable with Java/Spring Boot, Next.js/React/TypeScript, PostgreSQL, Docker, GitHub, Jira, Google Sheets/Docs/Slides, CRM exports, and BI/reporting workflows.

SELECTED AI / TECHNICAL PORTFOLIO

BreadCost bakery management SaaS - AI-assisted full-stack portfolio project

- Public GitHub project for bakery manufacturing cost accounting and operations. Built around event-sourced CQRS, Spring Boot/Java, PostgreSQL, Next.js/React/TypeScript, RBAC, bilingual Armenian/English UI, CI, Playwright E2E tests, QA plans, ArcMap architecture, requirements, Jira mapping, and release planning. Demonstrates prompt-driven full-stack building, domain modeling, test planning, and product/architecture discipline rather than simple code snippets.

SystemForge / Architektr - AI-first architecture-to-code operating concept

- Defined SystemForge as a software delivery factory, not an LLM wrapper: role-based expert teams, manager/governance loops, architecture-to-Jira execution, knowledge compounding, human approval gates, and cloud-native multi-tenant product thinking.

The.Director - SystemForge nerve-center proof of vision

- Created the GitHub proof point for SystemForge: The.Director translates the vision into an always-on orchestration component that selects expert audiences, narrates progress, supports live human steering/interruption, and can spawn sub-Directors for parallel exploration.
- Converted the VISION.md concept into an implementation-ready POC roadmap: CLI spine, dynamic Library, audience steering, Arbiter v1, knowledge envelopes, recursion, evolution cycles, and constraint guards.

Customer project progress reporting framework

- Designed a single-source-of-truth reporting approach using Jira or Excel exports feeding customer-facing progress views: milestones, dates, deadlines, status, stream coloring, RAID visibility, and static HTML/slide-ready reporting. Built for teams that need clearer project communication without fragile manual PowerPoint editing.

BlackScaleMedia / niche marketing company AI Business OS

- Designed AI-focused business operating system components for marketing and growth operations: offer/pricing logic, CRM workflow thinking, KPI dashboards, weekly progress reporting, Google Sheets/CRM export-based reporting, sales pipeline visibility, and executive decision cadence.

PROFESSIONAL EXPERIENCE

Delivery Manager - EPAM Systems | Jan 2026 - Present

Global medical device manufacturer for complex medical conditions, USA-based customer. Delivery across data, data platform, cloud, and application streams.

- Lead multi-stream delivery coordination across data, data platform, cloud, and applications, aligning requirements, capacity, prioritization, implementation, and customer-facing communication.
- Designed AI-supported delivery processes to reduce ambiguity in prioritization, capacity planning, reporting, and decision-making across distributed teams.
- Applied a SystemForge-style AI delivery workflow: convert raw inputs into requirements, architecture logic, delivery slices, Jira-ready stories, acceptance criteria, RAID items, and customer progress narratives.
- Used The.Director/SystemForge thinking as a practical delivery lens: break ambiguous customer work into expert perspectives, decision points, risk checks, Jira-ready slices, and readable progress narration for stakeholders.
- Designed a customer project progress reporting model that can use Jira/Excel as source-of-truth and generate clear visual status views: dates, deadlines, streams, milestones, dependencies, and executive/customer summaries.
- Used AI-assisted analysis to turn complex delivery status into concise stakeholder updates, decision logs, action items, and operating cadences.
- Built and improved SDLC governance: discovery, requirements, estimation, planning, delivery tracking, release readiness, and issue escalation.
- Positioned AI not as a toy layer, but as delivery infrastructure: a way to make progress, risks, dependencies, and commitments easier to see and act on.

Freelance AI Solutions Architect for Business Processes - BlackScaleMedia project / Niche Marketing Company | Jan 2026 - Apr 2026

AI-focused business automation, reporting, CRM, and operating-system design for a niche digital marketing / platform business.

- Designed AI-powered business operating system concepts covering weekly executive reporting, CRM/process workflows, sales pipeline visibility, offer/pricing logic, and KPI-driven management cadence.
- Built practical automation blueprints using GPT workflows, Google Sheets/CRM exports, dashboard logic, and structured operating reviews rather than expensive custom platforms first.
- Created the first marketable AI automation offer: AI-powered weekly business report from a Google Sheet, CRM export, or Excel file, aimed at founders who need clarity without a full BI build.
- Mapped operational data flows across revenue, customer success, marketing spend, finance, and delivery to support executive decisions: growth, efficiency, safety, owner accountability, and next actions.
- Developed pricing/packaging and go-to-market logic for AI operations services, including diagnostic, blueprint, implementation, and retainer-style engagement models.
- Translated marketing, CRM, and sales operations needs into implementation-ready assets: SOPs, dashboards, templates, handoff checklists, and prompts for AI-assisted execution.

Head of IT -> CTO -> COO - ClinstatDevice / Clinsoft | Jan 2023 - Jan 2026

Executive scope across IT, Product, PMO, HR, and Biostatistics; approx. 60 staff, 8 direct reports.

- Standardized SDLC, delivery governance, release gates, dashboards, and cross-functional operating rhythms; improved on-time delivery from approx. 30% to approx. 90%.
- Reduced lead time from approx. 2 months to approx. 1 week and cycle time from approx. 3 weeks to approx. 1 week through clearer requirements, backlog discipline, UAT, and delivery control.
- Cut change-failure rate from approx. 30% to approx. 10%, reduced MTTR from approx. 1 day to approx. 1 hour, and maintained approx. 99.96% uptime through release discipline, observability, and incident/postmortem practices.
- Owned complex feature lifecycles from concept to live release in regulated environments: BRDs/PRDs, acceptance criteria, stakeholder demos, UAT, validation, and production readiness.
- Built KPI/funnel observability and executive reporting so product, engineering, PMO, HR, finance, and clinical stakeholders shared one operating picture.
- Used technical fluency in APIs, events, microservices, data flows, HTML/CSS basics, and analytics to accelerate grooming, QA triage, and root-cause analysis.

CTO - IT-Americano | Apr 2022 - Oct 2022

- Shipped v1 on microservices architecture, validated approx. 10k concurrent users, and enabled daily deployments through CI/CD and observability.
- Improved sprint predictability from approx. 20% to approx. 90%, reduced scope churn from approx. 30% to approx. 10%, and cut deployment time from approx. 3 hours to approx. 30 minutes.
- Owned roadmap-to-release execution: specs, backlog hygiene, cross-functional delivery, UAT sign-off, stakeholder demos, and production support cadence.

CTO / COO - Biopic Medical LLC | Aug 2021 - Apr 2022

- Managed approx. \$4M engineering budget and improved throughput by approx. 4x while raising on-time delivery from approx. 30% to approx. 90%.
- Reduced cycle time from approx. 3 weeks to approx. 1 week, production defects from approx. 20/month to approx. 5/month, and budget variance from +25% to +2.5%.
- Led delivery governance, project budgeting, risk management, stakeholder reporting, and product/engineering execution across healthcare technology initiatives.

Director of Accounts, Project Management & Business Development - RedKite | Aug 2018 - Jul 2022

Agency model, multi-client delivery across 6 product squads.

- Led multi-client delivery across product squads; improved on-time delivery and sprint predictability from approx. 30% to approx. 90%.
- Expanded CI/CD adoption from monthly to weekly releases, improved forecast accuracy from approx. 30% to approx. 90%, and strengthened gross margin through scope control.
- Converted client vision into specs, user stories, mockups, process maps, UAT plans, KPI funnels, and roadmap decisions.

COO & CCO - EFU Group / EfuSoft & GambleBeast | Jan 2017 - Jul 2018

- Rebuilt engineering and delivery operations for gaming/content platforms; moved release frequency from monthly to bi-weekly and deployment time from approx. 4 hours to approx. 30 minutes.
- Doubled throughput, reduced change-failure rate from approx. 20% to approx. 5%, improved SLA compliance from approx. 60% to approx. 98%, and instituted KPI dashboards and incident SOPs.
- Owned feature development from concept to UAT/live operations, with commercial, design, engineering, data, compliance, and partner coordination.

Early Career - Operations, Support, UI/UX, and Applications Engineering Leadership | Pre-2017

- Scaled international support across Armenia and India, delivered SOPs and training for approx. 120 people, and contributed to a Frost & Sullivan award for customer centricity.
- Built foundations in requirements, process documentation, stakeholder updates, usability, technical support, and cross-functional execution.

CORE SKILLS

- **AI & Automation:** GPT/LLM workflows, AI-assisted development, prompt engineering for delivery artifacts, AI reporting, AI governance, agentic workflows, Director/orchestrator patterns, role libraries, arbitration loops, knowledge envelopes, Copilot/Claude/Cursor-style execution, human-in-the-loop controls

Delivery & Operating Systems: SDLC modernization, Agile/Scrum/Kanban, PMO, RAIDs, release governance, roadmap alignment, stakeholder management, executive reporting, OKRs/KPIs, SOPs

Product & Business Analysis: Discovery, BRDs/PRDs, user stories, acceptance criteria, UAT, customer journey maps, process modeling, pricing/packaging, go-to-market support

Dashboards & Data: KPI scorecards, CRM/reporting exports, Google Sheets systems, PowerPoint/static reporting, BI-ready models, forecasting, funnel analytics, operational cadence

Technical: Java, Spring Boot, REST APIs, event-driven architecture, microservices, PostgreSQL, Docker, GitHub, GitHub Actions, Jira, Next.js, React, TypeScript, HTML/CSS, JSON

Industries: Healthcare/life sciences, medical devices, gaming/media, digital marketing, professional services, bakery/manufacturing operations, financial services exposure

EDUCATION

PhD, Computer Science - IIAP NAS RA

MBA - HULT International Business School

AVAILABILITY

Fully remote across Europe-friendly time zones. Open to part-time, freelance, fractional, and senior full-time AI operations / AI solutions / AI-enabled delivery roles.
